

Technical Information Plastic Filler

presto Putty for plastics is a 2-component black polyester putty as a mixture of a highly elastic, amino-pre-accelerated polyester resin with different mineral, environment-friendly fillers. To fill scratches and damages and to aftertreat bonded plastic parts. Through its thixotropy and softness, profiles and contours can easily be rebuilt.

Besides the very good adhesion on nearly all plastics, the putty can also be applied on carbody sheets and zinc coated sheets.

For preparation and finishing your filling job, we recommend our presto sand papers. We offer a wide assortment of fine and coarse papers for dry and wet sanding.
