Technical Information Alkyton BASIC RAL

In the liquid-corrosion-inhibitor technology (LCI), a special system of integrated additives has been developed. These completely enclose the structures of the surface you want to paint and thus form a chemical connection. By this, the continuing oxidation stops and achieves a durable rust-protection. This rust protecting paint system combines 4 properties in 1 product:

- Primer
- Rust protection
- Paint
- Protecting coat.

the DUPLI-COLOR Alkyton forms an extremely flexible paint surface. It can be directly applied on grate (derust manually), steel, primer, wood and well-adhering old paintings. For indoor and outdoor applications.

For special surfaces, such as zinc, aluminium, stainless steel, iron metals or other smooth surfaces, we recommend to prime with DUPLI-COLOR Galvinol Zinc Primer.
