

Technical Information pre-fill Converter

The ColorMatic pre-fill spray paint is prefilled with propellant and specific additives and then filled by VitoMat filling machines with the desired coat. Innovative spray and valve technology guarantee the fine broad jet atomisation, a high application rate and constant pressure for best workmanship and professional-quality end results. The ColorMatic pre-fill converter also contains a converter that converts 2K topcoats in a 1-component, physically-drying paint. A large selection of pre-filled tins of various paint manufacturers is available to fill with 2K acrylic coating systems without adding hardener. Application: Ideal for spot repairs or refinishing parts
