

Technical Information SPRAYPLAST Thinner

Special thinner for DUPLI-COLOR SPRAYPLAST peel-off lacquer. To set up the working viscosity for application with a spray gun and eventually necessary cleaning of spray gun or tools.

Which thinner you need, depends on the surrounding temperature and the size of the object to be painted.

For optimal paint results use the following thinner:

Thinner short: at temperatures of 10-25°C or for smaller paint-jobs, e.g. mirrors, small vehicle parts.

Thinner long: at temperatures >25°C or for bigger paint-jobs, e.g. whole vehicles and big vehicle parts.
