

Technical Information RUST STOP Iron Mica

Active rust prevention by effective thick-film paint system in satin matt quality.

In the liquid-corrosion-inhibitor technology (LCI), a special system of integrated additives has been developed. These completely enclose the structures of the surface you want to paint and thus form a chemical connection. By this, the continuing oxidation stops and achieves a durable rust-protection. This rust protecting paint system combines 4 properties in 1 product:

1. Effective **primer** for perfect adhesion
2. Active **rust protection** by LCI technology
3. Highly covering **spray paint**
4. **Sealant** protecting from environmental influences

Adheres on nearly all surfaces, such as iron, blank and zinc-plated steel plates, copper, brass, aluminium (e.g. garden fences, gates, banisters, gardening tools etc.). Even applicable on tightly adhering rust and old paintings. Also applicable on wood, stone, GRP or glass.
