

Technical Information Light Filler

presto Light Filler has, due to the use of novel fillers, a density lower than 1 kg / dm³. That means, that the weight of the Light Filler is only half as high as conventional fillers. Therefore you can use it on objects, which shall not be loaded with high weight.

Typical applications:

- car bodies, even made of plastic
- re-working of weld seams and folds
- in boat building, during repair of boats and surfboards
- in model making or
- to repair powder coatings

For preparation and finishing your filling job, we recommend our presto sand papers. We offer a wide assortment of fine and coarse papers for dry and wet sanding.
